Observable universe - Wikipedia The observable universe is a spherical region of the Universe comprising all matter that can be observed from Earth at the present time, because electromagnetic radiation from these objects has had time to reach Earth since the beginning of the cosmological expansion. There are at least 2 trillion galaxies in the observable universe. Assuming the universe is isotropic, the distance to the edge. Universe - Wikipedia The Universe is all of space and time and their contents, including planets, stars, galaxies, and all other forms of matter and energy. While the spatial size of the entire Universe is still unknown, it is possible to measure the observable universe. The earliest scientific models of the Universe were developed by ancient Greek and Indian philosophers and were geocentric, placing Earth at the center. How are galaxies moving away faster than light? - Phys.org Official cosmology is based on the presuppositions that 1) the universe has a beginning and a Big Bang started it, 2) velocity of light (though constant locally) is an absolute universal constant and everything else is relative, 3) redshift is a measure of distance, 4) Supernova Type 1a is the only kind of Supernova, 5) the cosmic monsters like black hole, dark matter/ energy exists etc.

Star Wars Galaxies | Wookieepedia | FANDOM powered by Wikia Star Wars Galaxies (often abbreviated SWG) was a Star Wars-themed MMORPG developed by Sony Online Entertainment (SOE) and published by LucasArts for Microsoft Windows PCs. The base game, titled Star Wars Galaxies: An Empire Divided, was released on June 26, 2003 in the United States of America, November 7, 2003 in Europe, December 23, 2004 in Japan, and in 2006 in Australia. Evidence for the Big Bang - TalkOrigins Archive: Exploring ... b) Hubble Diagram. The basic idea of an expanding universe is the notion that the distance between any two points increases over time. One of the consequences of this effect is that, as light travels through this expanding space, its wavelength is stretched as well. Galaxy - Types of galaxies | Britannica.com Galaxy - Types of galaxies: Almost all current systems of galaxy classification are outgrowths of the initial scheme proposed by the American astronomer Edwin Hubble in 1926. In Hubble's scheme, which is based on the optical appearance of galaxy images on photographic plates, galaxies are divided into three general classes: ellipticals, spirals, and irregulars.

Researchers capture first 'image' of a dark matter web ... The composite image, which combines a number of individual images, confirms predictions that galaxies across the universe are tied together through a cosmic web connected by dark matter that has until now remained unobservable. Dark matter, a mysterious substance that comprises around 25 per cent of the universe, doesn't shine, absorb or reflect light, which has traditionally made it largely invisible. Chem4Kids.com: Elements & Periodic Table Now we're getting to the heart and soul of the way the Universe works. You know that a generic atom has some protons and neutrons in the nucleus and some electrons zipping around in orbitals. When those pieces start combining in specific numbers, you can build atoms with recognizable traits. RSR's List of Big Bang Predictions | KGOV.com * The Big Bang's Failing Foundational Assumptions of Homogeneity and Isotropy: NASA's article titled, Foundations of Big Bang Cosmology, begins stating that, "The Big Bang model of cosmology rests on two key ideas... that the matter in the universe is homogeneous and isotropic (The Cosmological Principle)." The big bang claim of homogeneity assumes, "that the matter in the universe is.

Observable universe - Wikipedia The comoving distance from Earth to the edge of the observable universe is about 14.26 gigaparsecs (46.5 billion light-years or 4.40 × 10²⁶ meters) in any direction. The observable universe is thus a sphere with a diameter of about 28.5 gigaparsecs (93 Gly or 8.8 × 10²⁶ m.
